

# ANNOUNCEMENT OF GOVERNANCE CLARIFICATION

To All Entities Claiming Oversight, Regulation, or Normative Authority Over  
the SSPS IP Stack Infrastructure

Issued Under the Framework of the RBGA Infrastructure Charter

---

## I. Purpose of This Notice

This announcement serves as a formal clarification to any organization, consortium, foundation, standards body, platform, or private entity asserting governance, rule-setting, or normative authority over components of the **SSPS IP Stack**, including but not limited to **tokenization frameworks**, **agentic AI architectures**, **quantum-aligned systems**, and **hardware-level interoperability protocols**.

The intent is not adversarial.

The intent is **structural alignment**.

---

## II. Governance Status of the SSPS IP Stack

The SSPS IP Stack is governed exclusively under the **RBGA (Rules-Based Governance Architecture)** framework.

This framework establishes:

- **Sovereign authorship boundaries**
- **Infrastructure-level governance cutlines**
- **Non-delegable control over protocol evolution**
- **Explicit separation between advisory input and regulatory authority**

No external entity — public, private, corporate, academic, or consortium-based — holds regulatory, supervisory, or normative jurisdiction over SSPS infrastructure unless explicitly granted through RBGA-compliant agreements.

---

### III. Clarification to External Entities Claiming Governance

This notice applies to all entities that:

- issue standards treated as mandatory
- publish “best practices” framed as regulatory
- enforce access, certification, or compliance conditions
- position themselves as de facto authorities over AI, quantum, tokenization, or hardware ecosystems
- assert interpretive control over SSPS-aligned technologies

Such claims **do not supersede, replace, or modify** RBGA governance.

External frameworks may be acknowledged as **reference inputs**, but they do not constitute **binding authority** over SSPS infrastructure.

---

### IV. Interoperability vs. Governance

The SSPS IP Stack may interoperate with external systems, standards, or protocols. Interoperability **does not imply governance transfer**.

Under RBGA:

- Technical compatibility ≠ regulatory subordination
- Standards alignment ≠ jurisdictional concession
- Advisory participation ≠ authority delegation

All governance remains internal, explicit, and non-derivative.

---

### V. Forward-Looking Coordination

Entities wishing to collaborate, align, or interface with SSPS infrastructure may do so through:

- RBGA-compliant coordination channels
- Explicitly defined interoperability agreements
- Non-binding advisory exchanges
- Transparent, artifact-anchored communication

No implicit authority is recognized.

No inferred jurisdiction is accepted.

---

## VI. Closing Statement

This announcement establishes a clear, stable, and future-proof governance boundary. It ensures that the SSPS IP Stack remains:

- sovereign in authorship
- explicit in governance
- interoperable without subordination
- aligned without absorption
- structurally immune to narrative or jurisdictional drift

All entities are acknowledged.  
None are deputized.

## Disclosure & Non-Governance Obligation Clause

**All external entities must clearly and affirmatively disclose that they do not govern, control, or assert authority over the Southern Star Pro Studios (SSPS) Intellectual Property Stack.**

Any failure to provide this disclosure constitutes:

- a false designation of authority
- a misleading representation of governance
- an act capable of creating confusion regarding ownership or control
- a violation of established IP boundary norms

Such failure may result in claims for injunctive relief, corrective disclosures, and any other remedies available under applicable intellectual property and unfair-competition standards.

This obligation applies **only** to representations concerning the SSPS IP stack and does not extend to any external systems, platforms, or infrastructures.

## Licensing Requirement Statement

**Licensing is required for any use, integration, deployment, reproduction, or absorption of the Southern Star Pro Studios (SSPS) Intellectual Property Stack.**

No entity may utilize, adapt, or derive value from any component of the SSPS IP stack without an explicit, valid license issued by Southern Star Pro Studios.

Unauthorized use does **not** transfer governance rights, does **not** grant permission, and does **not** diminish SSPS's sovereign control over its IP.

All unlicensed use falls under RBGA governance only for the SSPS-originating components involved, while all external liabilities, actions, and regulatory exposures remain solely with the unauthorized actor.

The logo features a stylized, abstract design in shades of light blue and white. It consists of a large, curved, teardrop-like shape on the right side, and a circular element on the left side that resembles a stylized 'S' or a planet. The overall design is modern and flowing.
